CAN YOU AFFORD TO LOSE INTERNET CONNECTIVITY?

Internet Redundancy

Primary Internet Connection

Unified Threat Manager Appliance

Secondary Internet Connection

Network Devices
Multiple Internet Connections can be connected to either a single or clustered set of UTM Appliances. Internet Connections can be configured as “Active-Active” or “Active-Passive”. In Active-Active mode, bandwidth capacity across all Internet Connections can be utilized simultaneously. While in Active-Passive mode, only the primary Internet Connection is used for production purposes, and is configured to failover over to the secondary Internet Connection(s) in the event of an outage.
